highlights in this issue

- » The area of broadleaved plantations and harvest of logs from these plantations continued to grow strongly in 2005-06.
- » Despite soft demand in the domestic housing market, Australia's sawnwood production increased in 2005-06, based on import replacement and a continuation of strong export growth to Asian markets.
- » Woodchip exports rose significantly in the first two quarters (September-December quarters) of 2006-07, with broadleaved woodchip exports from Western Australia and Victoria growing most strongly.

forest resource

- » In calendar year 2006, Australia's plantation area increased by 4.5 per cent to 1.8 million hectares, consisting of 1.0 million hectares of coniferous and 0.8 million hectares of broadleaved plantations (figure A).
- » The area of broadleaved plantations increased by 9.1 per cent in 2006, with significant areas planted in Tasmania, Victoria and Western Australia.
- » The area of coniferous plantations increased by around 1.1 per cent in 2006. Over half of coniferous plantation establishment occurred in New South Wales.
- » Roundwood removals from Australia's forests declined by 0.9 per cent in 2005-06 to 26.7 million cubic metres. The decline in removals reflected lower harvests from native forests, which have fallen steadily since 2002-03. The volume of roundwood removals from native forests declined by 13 per cent in 2005-06 (figure A).
- » In contrast, the volume of roundwood removals from broadleaved plantations has increased steadily over the past decade. After increasing by 61 per cent in 2004-05, broadleaved plantation removals increased by a further 29 per cent in 2005-06.
- » Despite the lower volume of total log removals in 2005-06, the value of log production from Australia's forests increased by 1.2 per cent, driven largely by an increase in the price of broadleaved logs.

fig A forest area and log removals
Australia

Note: Data for plantation areas are reported on a calendar year basis. In this graph, data for 2006 appears in the 2005-06 column.

production and consumption

- » Sawnwood production increased in volume by 2.1 per cent in 2005-06, despite relatively weak domestic demand. Increased softwood sawnwood production outweighed the decline in hardwood sawnwood production from native forest logs.
- » Wood based panel production increased in volume by 2.7 per cent in 2005-06, despite the sharp reduction in plywood production following the September 2005 closure of the Norply plywood factory in Kyogle, New South Wales. The closure of the Carter Holt Harvey MDF

mill in Bell Bay, Tasmania, in July 2006 will affect production in 2006-07.

- » Paper and paperboard production declined in volume by 0.7 per cent in 2005-06, principally because of a 6.3 per cent decline in newsprint production. This offset a 10 per cent increase in the volume of household and sanitary output.
- » Total residential building commencements in Australia fell by 4.4 per cent in 2005-06. Commencements rose only in Western Australia and the Northern Territory.
- » Reflecting the soft domestic housing market, apparent consumption of sawnwood declined by 3.1 per cent in 2005-06 (figure B). In contrast, apparent consumption of wood based panels increased by 3.5 per cent, driven largely by strong growth in consumption of medium density fibre-board (MDF). Consumption of paper and paperboard declined slightly over the year.

trade

- » Net imports of sawnwood fell significantly in 2005-06, with a large fall in imports of coniferous sawnwood, particularly from New Zealand, and a substantial rise in coniferous sawnwood exports to rapidly expanding markets in Asia (figures C and D).
- » In the September quarter 2006, imports of both sawnwood and paper and paperboard products rose sharply, but declined in the subsequent December quarter.
- » Exports of sawnwood, particularly coniferous sawnwood, continued to grow strongly in the September and December quarters of 2006.
- » Sawnwood exports to Viet Nam grew most dramatically, reaching 26 000 cubic metres or \$6.2 million in the December quarter 2006. These exports, all of which were coniferous sawnwood, made Viet Nam the second largest export market, by volume, in that quarter, behind Chinese Taipei.
- » Export growth was also significant to China, which remains the largest export destination for Australian sawnwood, by value.
- » Trade patterns in other forest products were mixed in 2005-06, with the value of wood based panel imports increasing by 5.6 per cent over the year, and the value of paper and paperboard exports falling by 4.7 per cent as a result of lower exports

fig B **annual growth in sawnwood consumption and housing starts**

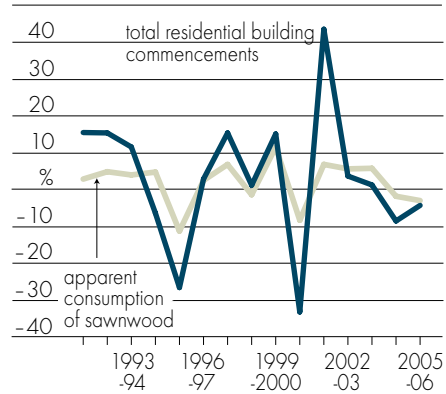

fig C **Australian sawnwood imports, by source**

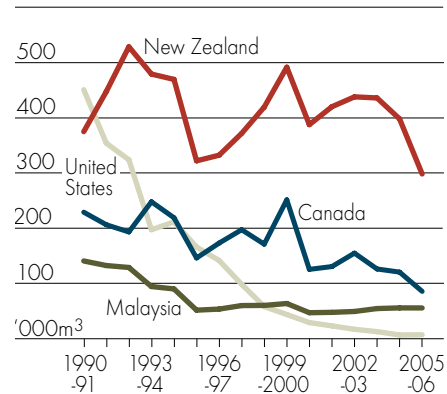

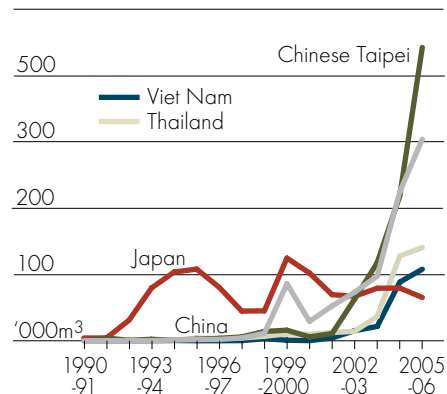

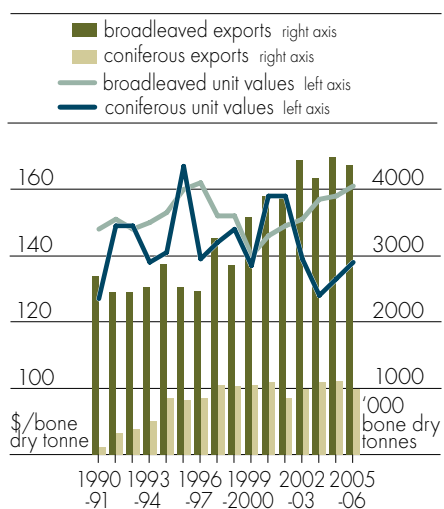

fig D **Australian sawnwood exports, by destination**

of printing and writing paper and household and sanitary products to New Zealand.

- » As expected, the July 2006 closure of the Carter Holt Harvey MDF mill in Bell Bay, Tasmania, led to a significant decline in Australia's exports of MDF. The volume of MDF exports fell by 26 per cent in the September quarter 2006, relative to the previous quarter, and by a further 36 per cent in the December quarter 2006.
- » The total value of woodchip exports fell by 2.2 per cent in 2005-06 because of the significant reduction in native hardwood woodchip exports (figure E). This offset strong growth in supply from hardwood plantations and higher woodchip prices.
- » Woodchip exports rose strongly in the first two quarters of 2006-07. In the September quarter 2006, the volume of exports increased by 1.8 per cent relative to the previous quarter, while the value increased by 4.4 per cent, representing higher negotiated woodchip prices with Japan. In the December quarter 2006 the volume and value of woodchips each increased by over 9 per cent.
- » Broadleaved woodchip exports from Western Australia and Victoria have grown most strongly in the first two quarters of 2006-07. Virtually all of the increase in woodchip exports has been broadleaved woodchips to Japan.

fig E woodchip export volumes and unit values

methodology

The statistics reported in this publication are derived from a variety of sources. The data sources and assumptions made are listed in the footnotes to each table.

In general, all data in the publication relating to imports and exports have been compiled from information published monthly by the Australian Bureau of Statistics in *International Trade*, electronic data service (cat. no. 5464.0), which is supplemented with data sourced from industry organisations when available. Median monthly trade unit values have been used from January 2002 wherever the monthly value has fallen below the median value by 25 per cent.

Care should be taken when using Australian export statistics, by commodity and destination, owing to data quality issues associated with volumes and unit values in disaggregated data.

Production data are sourced from the various state forest services and industry organisations, with some estimates derived from ABARE datasets.

All data are subject to revision.

A number of changes have been made to the presentation and content of this issue of AFWPS, based on feedback received from users of the publication and the associated datasets. ABARE is interested in the ongoing development of AFWPS to ensure that data continues to be relevant and useful to as many users as possible. If you have any comments on the data or issues presented in this publication, please contact Kevin Burns on +61 2 6272 2253 or email kburns@abare.gov.au.

sawnwood production estimates

In recent years a number of state based and ABS sawnwood data collection surveys have ceased. In response, ABARE has adopted new approaches to estimate sawnwood production data. This may have created breaks in the time series. In the November 2006 edition of this publication, ABARE revised many of the sawnwood data series back to 1999-2000, using an approach that reconciled output with ABARE's sawlog removals data. While this method improved the consistency and comparability of state production data over time, it has been generally recognised within the forest industry that a comprehensive survey of sawmills is required to provide a reliable benchmark of sawnwood production in each state.

ABARE is preparing to undertake a telephone survey of softwood and hardwood sawmills within the coming months. The survey will collect the minimum data necessary for calculating sawnwood production and providing a new 'base' which can be used to calibrate production series for past years. The results of this survey are expected to be presented in the November 2007 issue of AFWPS. If successful, it is hoped that ABARE can continue to carry out regular surveys of the industry, and perhaps to expand the survey to estimate a broader range of data.

roundwood removals from Australia's forests

Each year ABARE collects log removal and price data from a range of forest growers and major log purchasers as part of the survey of gross value of log production. These sources include crown native and plantation forest data from state forest agencies and data from major plantation companies. However, with the exception of Tasmania, there are no state based central collection points for private native forest data. Consequently, estimates of removals from this resource have relied on partial surveys of major processors that are known to purchase from private forest managers and general estimates from forest industry experts. The November 2006 issue of AFWPS contained some major revisions to the estimates of private native forest removals in New South Wales.

This issue of AFWPS contains some revisions to historical removals estimates, based on ongoing data checking and discussions with some state forest agencies. In addition, removals of firewood for industrial and domestic purposes have been excluded from total removals in this issue of AFWPS because of inconsistencies in the definition and reporting of this log category across states.

national forest and plantation inventories

The information on forest areas, by forest type and tenure class, and that on plantation areas and plantings were provided by the National Forest Inventory and National Plantation Inventory. Further information about forest and plantation data can be obtained by contacting:

explanations

definitions

Values presented in trade tables are 'value for duty' for imports and 'free on board' (fob) from Australian ports for exports.

Apparent consumption is defined as production plus imports minus exports. Excludes any allowances for change in inventory or interstate transfers.

Small discrepancies in totals are generally caused by rounding. All data are subject to revision.

The National Forestry Inventory uses the following definitions for tree height:

- > **low:** 2-10 metres
- > **medium:** 11-30 metres
- > **tall:** greater than 30 metres

and the following terminology for forest area:

- > **closed forest** refers to areas with trees over 2 metres tall, and with a canopy cover greater than 80 per cent;
- > **open forest** refers to areas with trees over 2 metres tall, and with a canopy cover between 50 and 80 per cent;
- > **woodland** refers to areas with trees over 2 metres tall, and with a canopy cover of between 20 and 50 per cent.

^a Prior to 2000-01 groups were based on Manufacturing Establishments, from 2000-01 ABS has adopted a new statistical infrastructure based on the Australian Business Number, hence data from 2000-01 is not directly comparable to previous years, see Appendix 3 in ABS cat. no. 8221.0 for comparative tables. ^b Turnover is defined as follows: sales of goods whether produced by the establishment or not, plus transfers out of goods to other establishments of the same enterprise, plus bounties and subsidies on production, plus all other operating revenue from outside the enterprise such as commission, repair and service revenue, plus capital work done for own use or for rental or lease. Receipts from rent, leasing, interest other than hire purchase, royalties and the sale of fixed tangible assets are excluded. ^c Sales and service income is defined as follows: sales of goods whether or not manufactured by the business and includes income from consulting services, repair, maintenance and service income and fees, contract, subcontract and commission income, management fees/charges from related and unrelated businesses. Includes rent, leasing and hiring income derived from ownership of land, dwellings and other equipment. Excludes royalties from mineral leases, income from finance leases and payments received under hire purchase arrangements. They are exclusive of goods and services tax (GST). Prior to 2000-01 values were on a value of turnover definition which is not directly comparable to the sales and service income definition. ^d 2004-05 is the latest available data. ^e Included with Paper bag and sack.

^a Industry value added represents the value added by an industry to the intermediate inputs used by the industry. It is the measure of the contribution by manufacturing businesses to gross domestic product. The derivation of IVA is as follows: Sales and service income plus funding from federal, state and/or local government for operational costs plus capital work done for own use plus closing inventories less opening inventories less purchases of goods and materials less other intermediate input expenses. Excludes wage and salary expenses, insurance premiums, interest expenses and depreciation. As a measure of economic activity it is not equivalent to operating profit before tax. ^b 2004-05 is the latest available data. ^c Prior to 2000-01 groups were based on Manufacturing Establishments, from 2000-01 ABS has adopted a new statistical infrastructure based on the Australian Business Number, hence data from 2000-01 is not directly comparable to previous years, see Appendix 3 in ABS cat. no. 8221.0 for comparative tables. ^d Included in total paper and paper products.

^a Pulpwood logs are included in the table exports of roundwood. ^b Broadleaved woodchip volumes were confidential from February 2000 to May 2000. From 1 June 2000 to April 2005, ABS have applied selected country and state confidentiality restrictions. From February 2003 to April 2005 all state details are confidential. All selected country and state confidentiality restrictions for broadleaved woodchip exports ceased in April 2005. ^c Bone dry tonnes.
